

CLAIMS

1. Safety airbag located in the headrest of a motor vehicle seat, characterised by the fact that after its activation the wings (14) extend on both sides of the headrest (1) and forward, while between the wings (14) there is a wedge-shaped area (15) continuing the forward direction.
2. Safety airbag according to the claim 1, characterised by the fact that the wings (14) overlap a part of the front side of the headrest (1) and they fill in the space between the side wall of the car body and the neighbouring headrests.
3. Safety airbag according to the claim 1 or 2, characterised by the fact that the wings (14) adjoin the front side (18) of the seat (2) in its upper part below the headrest (1).
4. Safety airbag according to any of the claims 1 up to 3, characterised by the fact that there is a connecting part (16) between the wings (14).
5. Safety airbag according to any of the claims 1 up to 4, characterised by the fact that it is located in the hollow (9) of the holder (5) of the headrest (1).
6. Safety airbag according to any of the claims 1 up to 4, characterised by the fact that it is located in the hollow (9) of the holder (5) of the headrest (1) with adjustable height and direction of the longitudinal axis of the vehicle.
